

**Team Name: Stellar (Group 62)**

**GitHub: <https://github.com/BradSmith2015/Stellar>**

**Members: Bradley Smith**

**Henok Hailemariam**

**Michael Merola**

**Mingxuan Zhang**

**Vail Dorchester**

## **Milestone Two**

**Project Management Tool: We will be using Zoho to manage tasks, documents, and sprints.**

**Project Plan:**

**We are going to design the UI and try to figure out the prototype of our website in next few weeks and get started on the back-end. We will also start to learn how to use the API from Spotify.**

**Agile Standup:**

**Ming - Ming has been working on learning React and designing a front end. He says that he is struggling with the idea and methodology behind connecting the front end to the back end, and that is what he is going to focus on learning in the near future.**

**Vail - Learning React on Code Academy, messing around in prototyping tool (Adobe XD), Designing scratch front-end UI on paper. Challenged by learning React, difficult to use new software but tutorials help with process.**

**Brad - Doing the Code Academy tutorials on javascript and react, and one of the biggest problems has been learning all of that in conjunction with everything else that has been happening in school and this course.**

**Henok - Henok has also been learning react and javascript on CodeAcademy.com and Tutorialspoint.com, and has also been struggling a bit with figuring out the best place to learn react as well as building a solid foundation in javascript and react.**

**Michael - Michael has been working on a design for the front end UI.**

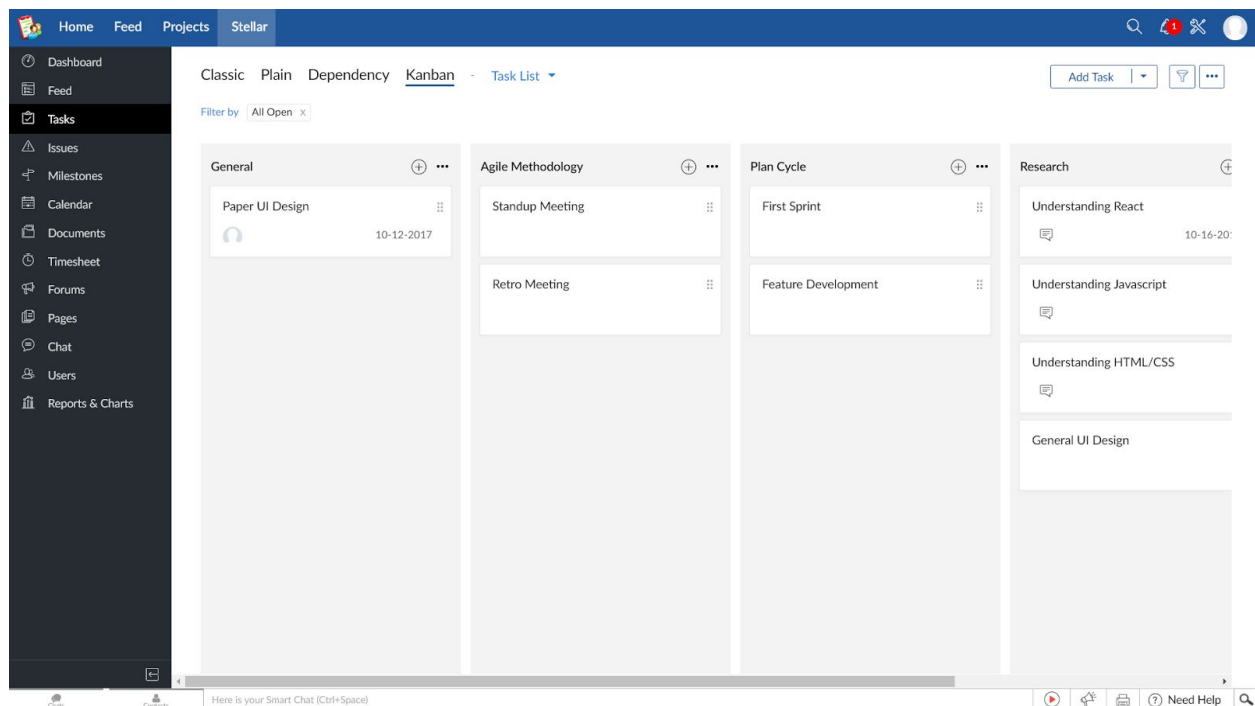

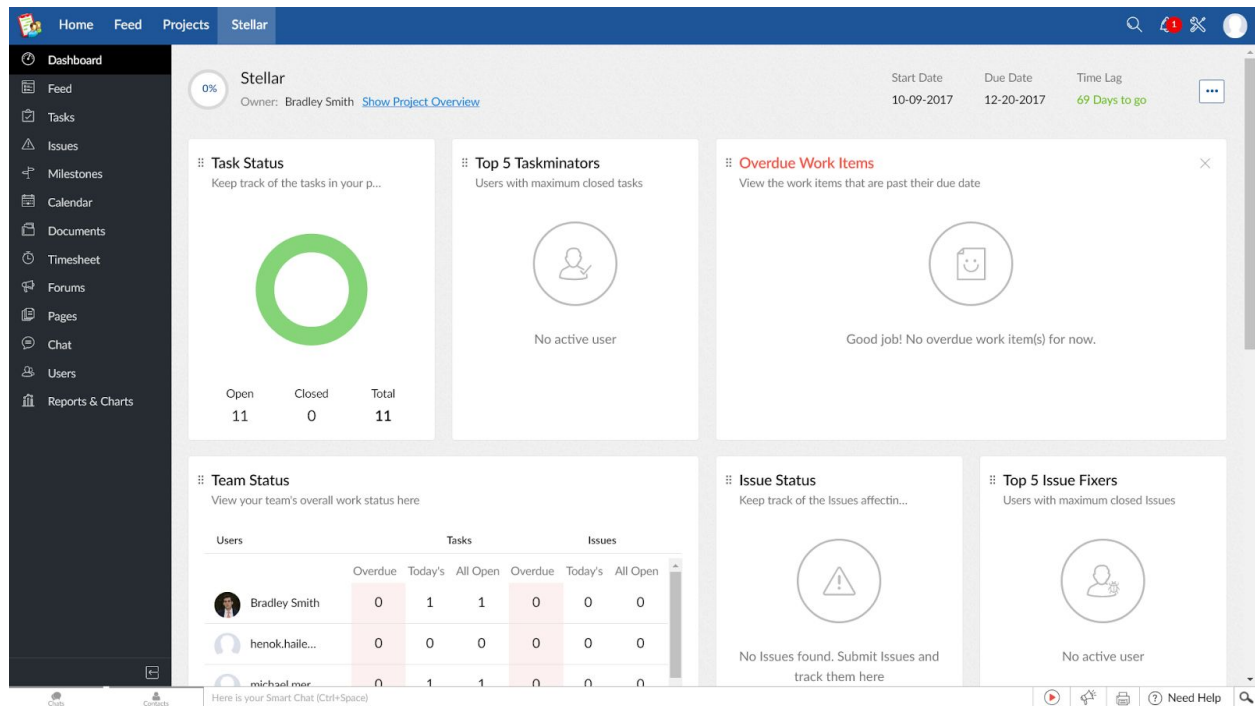

**Team - The team as a whole has been working on time management with this project.**

**Agile Retrospective:**

**Positives: The team has done a good job of accomplishing tasks and being proactive with the project. Many of us have already started learning React and Javascript technologies on our own time.**

**Negatives: Some of the negatives have been mostly due to time management, with midterms and homework most of the team has been struggling with creating extra time to work on the project. This also involves most of the team finding the time to learn react and javascript.**
